Dockerfile
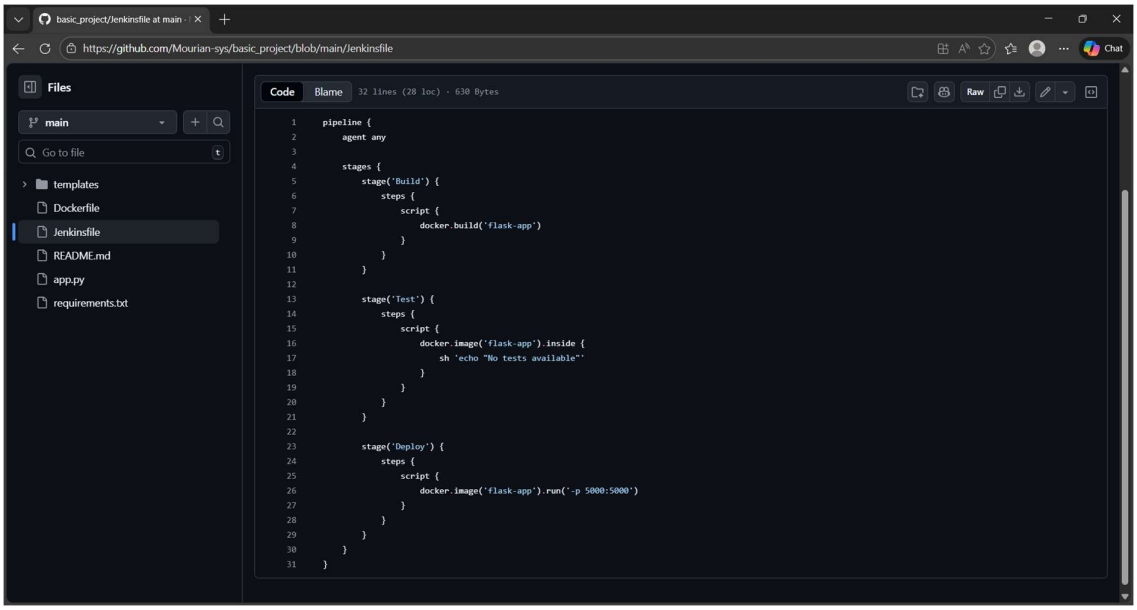
Use the official Python image from the Docker Hub
FROM python:3.9-slim
Set the working directory inside the container
WORKDIR /app
Copy the current directory contents into the container at /app
COPY . /app
Install any needed packages specified in requirements.txt
RUN pip install --no-cache-dir -r requirements.txt
Make port 5000 available to the world outside this container
EXPOSE 5000
Define environment variable
ENV FLASK_APP=app.py
Run the application
CMD ["flask", "run", "--host=0.0.0.0"]



Same as all pipeline created and connect with GIT repo with the webhook and add extra of docker extension on the Jenkins and give build now it automatically build succesfull and check with public IP address with 5000 it shown output
