---

1. pwd
Displays the present working directory (current location in the file system).

2. cd /
Changes the current directory to the root directory.

3. ls -l
Lists files and directories in long format showing permissions, owner, size, and date.

4. cd dev
Moves into the dev directory from the current location.

5. cd etc
Navigates to the /etc directory which contains system configuration files.

6. cd
Changes the directory to the user's home directory.

7. sudo su
Switches the current user to the root user with superuser privileges.

8. sudo usermod -aG mourian dheena
Adds the user dheena to the group mourian without removing existing groups.

9. cd /home
Moves to the /home directory where user home folders are stored.

10. ls
Displays the list of files and directories in the current directory.

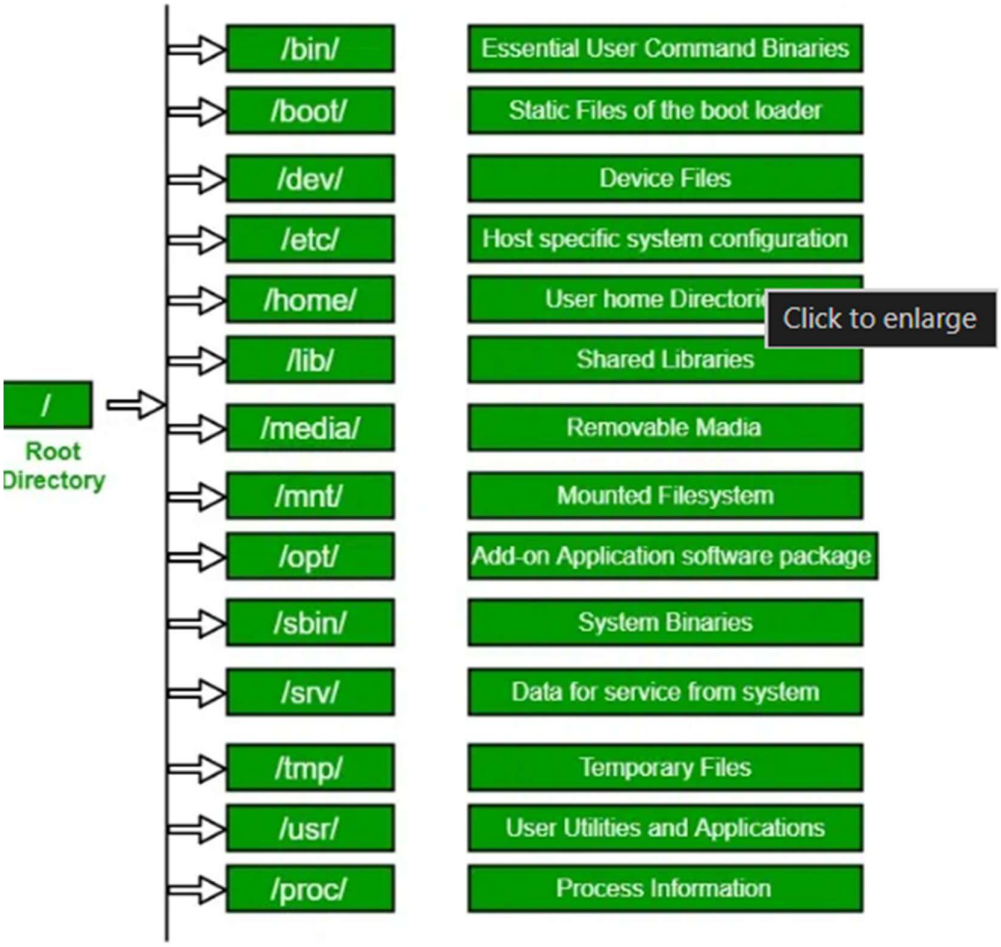
11. history
Shows the list of previously executed commands in the terminal.

12. ls -lrt
Lists files in long format, sorted by time, showing oldest files first.

13. chmod 777 mourian
Gives read, write, and execute permissions to owner, group, and others for mourian.

14. cd ..
Moves one level up to the parent directory.

Linux File Hierarchy Structure :



linux-directory
