Web hosting in linux

ASSIGNMENT 5

UBUNTU NGINX WEB HOSTING:

To use to create this commands

1. **apt install -y**
   Used to install packages automatically without asking confirmation (-y means “yes” to all prompts).
2. **apt install nginx**
   Used to install the **Nginx web server** software on Ubuntu from the package repository.
3. **systemctl start nginx**
   Used to **start the Nginx service**, so the web server begins running.
4. **systemctl status nginx**
   Used to **check the current status** of Nginx (running, stopped, or errors).
5. **/var/www/html/**
   This is the **default web root directory** of Nginx where website files are stored.
6. **Create file (filename) in /var/www/html/**
   Used to place website files (HTML) so Nginx can display them in the browser.
7. **Access via browser (IP / domain)**
   Used to **verify hosting**, Nginx loads the file from /var/www/html/filename.

```
Running kernel seems to be up-to-date.

No services need to be restarted.

No containers need to be restarted.

No user sessions are running outdated binaries.

No VM guests are running outdated hypervisor (qemu) binaries on this host.
root@ip-172-31-68-220:/home/ubuntu# systemctl status nginx

And then created our file

I'm Mourian

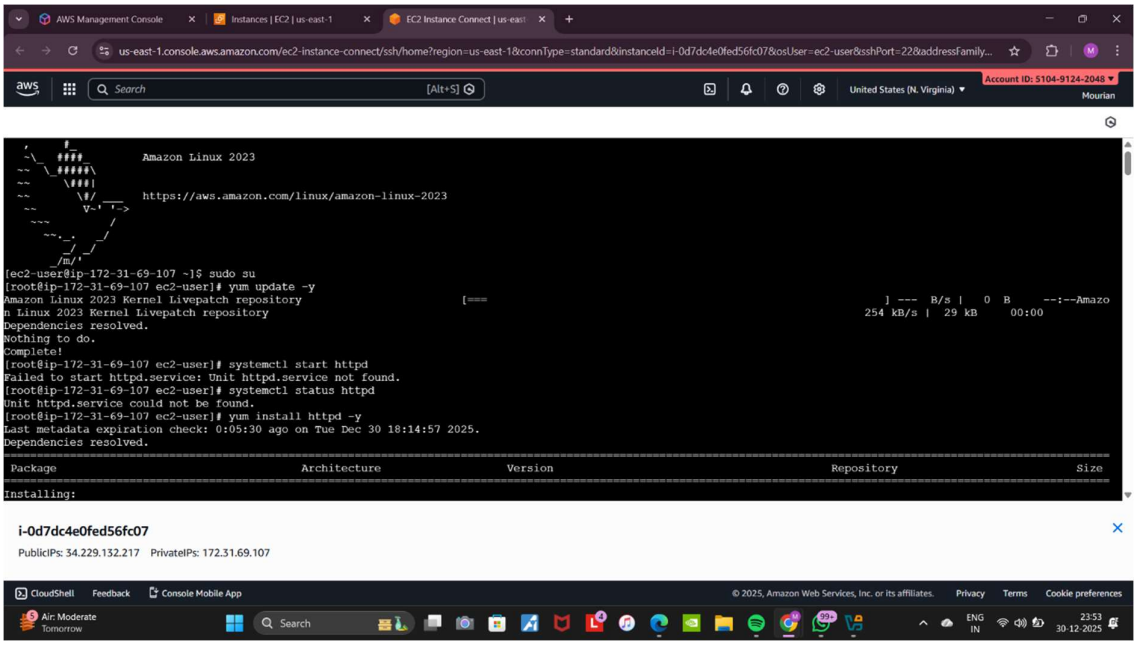
now linux create web hosting in httpd & nginx:

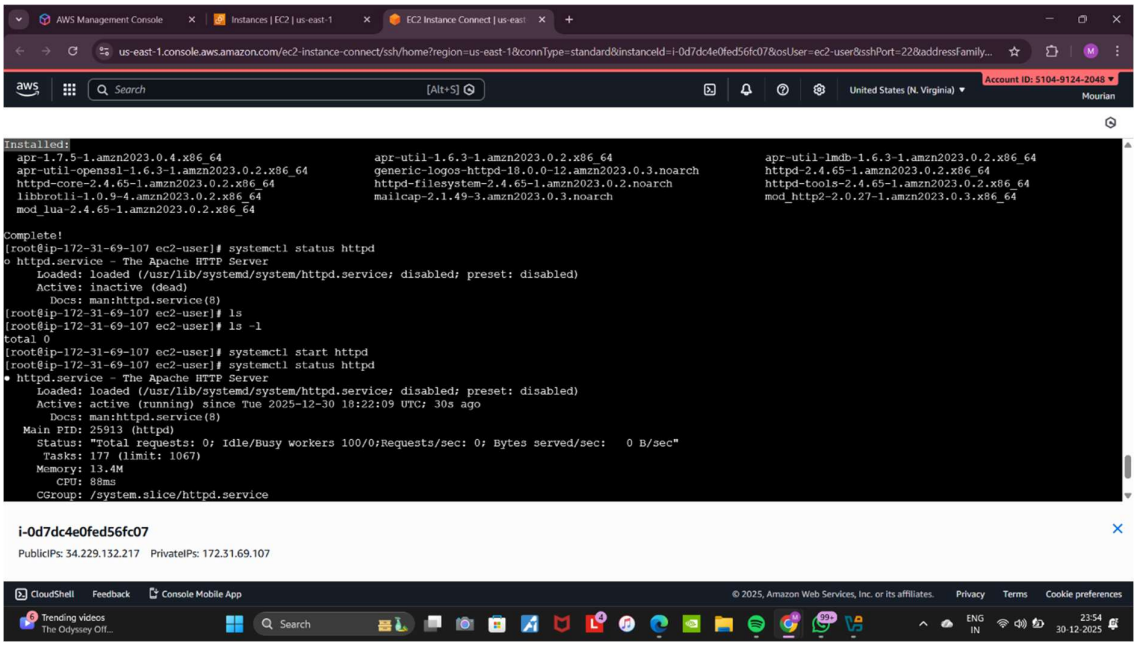
same commands used but path file is change ,

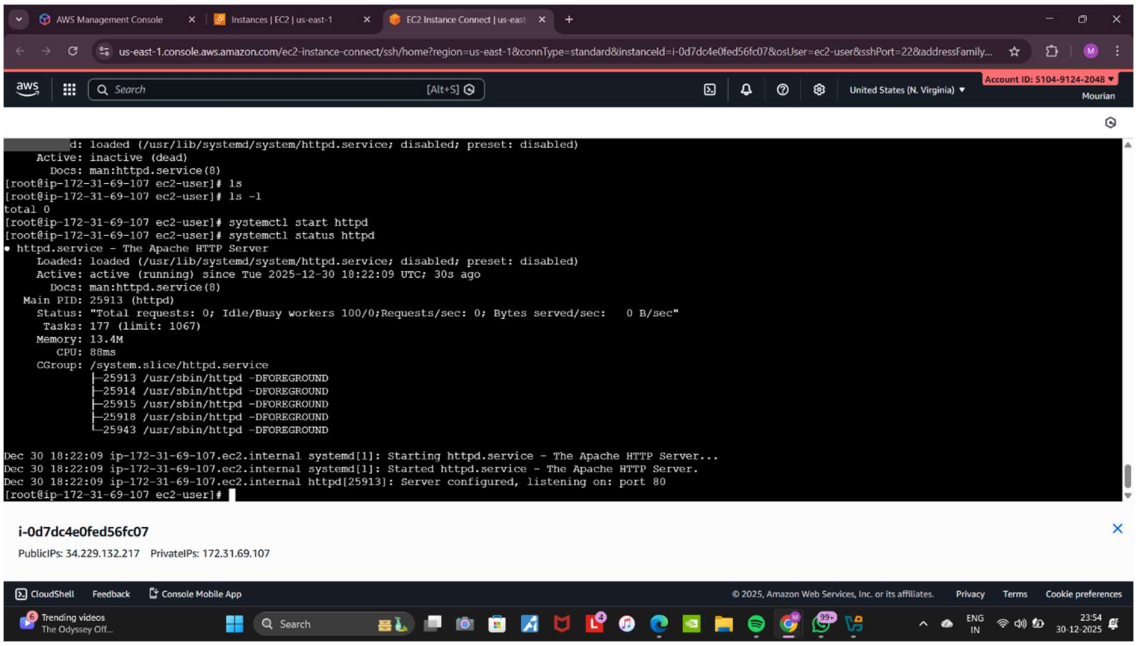
httpd - /var/www/html/

ngnix - /usr/share/nginx/html/

httpd:







AWS Management Console
Instances | EC2 | us-east-1
EC2 Instance Connect | us-east
us-east-1.console.aws.amazon.com/ec2-instance-connect/ssh/home?region=us-east-1&connType=standard&instanceId=i-0d7dc4e0fed56fc07&osUser=ec2-user&sshPort=22&addressFamily...

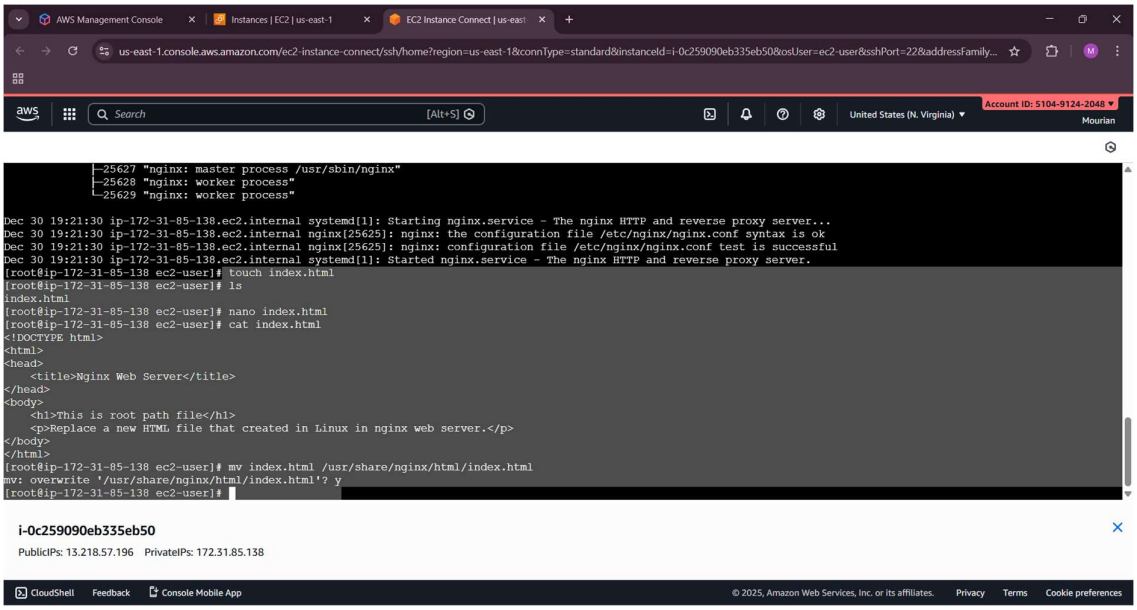
Welcome to nginx!
Not secure
13.218.57.196
Incognito
Welcome to nginx!
If you see this page, the nginx web server is successfully installed and working. Further configuration is required.
For online documentation and support please refer to nginx.org.
Commercial support is available at nginx.com.
Thank you for using nginx.



All web hosting has created and executed successfully.
